WORK-LIFE BALANCE

AI Calendar Generator App

A productivity breakthrough.

Motion's Intelligent Calendar takes your meetings. Your tasks. Your to-do list. Your activities. And creates one perfect, optimized schedule to get it all done.

Become insanely productive — without spending hours each week religiously and manually planning your schedule.

Let Motion's software do it for you.

Try Motion for free

**GEZONDERE
BALANS**

Ahmad, S. F., Han, H., Alam, M. M., & et al. (2023). **Impact of artificial intelligence on human loss in decision making, laziness, and safety in education.** Humanities and Social Sciences Communications, 10(311). <https://doi.org/10.1057/s41599-023-01787-8>

Conclusion

AI can significantly affect the education sector. Though it **benefits** education and assists in many academic and administrative tasks, its concerns about the loss of decision-making, laziness, and security may not be ignored. It supports decision-making, helps teachers and students perform various tasks, and automates many processes. Slowly and gradually, AI adoption and dependency in the education sector are increasing, which invites these challenges. The results show that using AI in education **increases the loss of human decision-making capabilities, makes users lazy** by performing and automating the work, and increases **security and privacy issues.**

FROM THE FIELD

New Evidence Affirms Teachers Should Go Slow Using AI to Grade Essays

[Jill Barshay](#)

CULTURAL
AI-BIAS

“—
AI-beoordelingssystemen, zoals GPT-4o, brengen het risico van **raciale bias** met zich mee, zoals blijkt uit studies die **lagere scores** tonen voor essays van Aziatisch-Amerikaanse studenten in vergelijking met menselijke beoordelaars. Hoewel deze technologie tijd kan besparen, is **grondig testen en zorgvuldige kalibratie** noodzakelijk om eerlijkheid te garanderen voordat ze op grote schaal in scholen wordt ingezet.

How exposure to **blue light** affects your brain and body

BY DISRUPTING MELATONIN, **SMARTPHONE LIGHT** RUINS SLEEP SCHEDULES. THIS LEADS TO ALL KINDS OF **HEALTH PROBLEMS**:

The disruption to your sleep schedule might leave you distracted and impair your **MEMORY** the next day.

A poor night's sleep caused by smartphone light can make it **HARDER TO LEARN**.

Over the long term, not getting enough sleep can lead to **NEUROTOXIN** buildup that makes it even harder for you to get good sleep.

People whose melatonin levels are suppressed and whose body clocks are thrown off by light exposure are more prone to **DEPRESSION**.

By disrupting melatonin and sleep, smartphone light can also mess with the hormones that control hunger, potentially increasing **OBESITY RISK**.

There's some evidence that blue light could damage our vision by harming the **RETINA** over time — though more research is needed.

Researchers are investigating whether or not blue light could lead to **CATARACTS**.

There's a connection between light exposure at night and the disturbed sleep that come with it and an increased risk of breast and prostate **CANCERS**.

**COLLECTIEVE
WAARDEN**

Neophytou, E., Manwell, L. A., & Eikelboom, R. (2021). **Effects of excessive screen time on neurodevelopment, learning, memory, mental health, and neurodegeneration**: A scoping review. *International Journal of Mental Health and Addiction*, 19(3), 724–744. <https://doi.org/10.1007/s11469-019-00182-2>

Conclusion

The majority of studies evaluated demonstrated a range of detrimental effects of excessive screen time on **neurodevelopment, learning, memory, mental health, and potential increased risks of early neurodegeneration**. However, experimental research exploring screen time is limited and future research should include greater use of animal models of human behavior, specifically to assess the effects of chronic sensory stimulation on the developing brain and neurobiological differences between males and females. Research should also aim to assess any lasting effects of early screen time exposure on middle and late adulthood.

Katholieke onderwijskoepel vraagt meer geld voor laptops: "Moesten zelf 68 miljoen bijleggen" | VRT NWS Nieuws

Katholiek Onderwijs Vlaanderen vraagt meer geld voor de digisprong. De investering van ruim 300 miljoen euro om het onderwijs te digitaliseren, was volgens topman Lieven Boeve niet voldoende. "Niet alleen bleken laptops duurder uit te...

“

Volgens de scholen zijn de lessen zo visueel aantrekkelijker en interactiever. Ook kan je met VR veilig experimenteren zonder risico's. De volgende stap is leerkrachten opleiden zodat ze zelfstandig met VR kunnen werken. Of de rest van de Vlaamse scholen meer VR zal gebruiken, valt af te wachten.

THE END

Vat dit samen in een erg korte alinea

De presentatie schetst een 35-jarige leerkracht lager onderwijs en onderzoekt hoe nieuwe technologieën kansen bieden voor onderwijs, gezin, creativiteit en sociale interactie, maar ook uitdagingen zoals AI-bias, schermtijd, privacy en balans tussen werk en privé. Hoewel technologie innovatie en efficiëntie bevordert, is zorgvuldige integratie cruciaal om risico's zoals polarisatie en digitale overbelasting te vermijden.
